

The Infinity Set Up

The Infinity is EZ to set up

Choose which side of sink you want to set it on. Measure the hose lengths needed and add a couple of inches in case of any mistakes in measurement.

1. As seen in the attached photo the diverter with the white knob(lever) gets attached to the sink faucet.
2. One of the cut hoses is attached to the faucet diverter and this hose gets attaches to the yellow input valve on the bottom of the Infinity. Push the hose into this yellow valve (it is a compression fitting). If you ever want to remove the hose, push the yellow ring in and it release the hoses.
3. The other hose gets attached to the white output valve on the bottom of the unit as seen in the attached photo.
4. Drape this return hose into sink as seen in photo.
5. The electrical plug gets plugged into the bottom of unit as seen in photo
6. The On / Off switch gets turned on
7. Once set up run 6-8 liters of water through machine to eliminate any loose carbon (charcoal). Water may turn black for a awhile this is normal. You are flushing out any loose carbon powder
